Perspectives in Total Hip Arthroplasty: Advances in Biomaterials and their Tribological interactions (Woodhead Publishing Series in Biomaterials)

Total hip arthroplasty, the most commonly performed orthopedic procedure, is used to replace or reconstruct the hip with an artificial joint. *Perspectives in Total Hip Arthroplasty* outlines developments in technologies and biomaterials used for this procedure, with a focus on the tribological interactions of the materials used.

Part one outlines the history of total hip arthroplasty and goes on to explore advances in techniques and biomaterials. Part two focuses on the tribology of materials used to perform this procedure, explaining the impact of wear on the load-bearing surface, a major cause of failure in hip prostheses. Chapters review a range of materials, including modern biomaterials, hybrid materials, metal, ceramic, and polyethylene. The book also discusses the tribological interactions of these materials when used in total hip arthroplasty.

Perspectives in Total Hip Arthroplasty is a key resource for clinicians, researchers, and academics interested in the tribology of total hip arthroplasty, as well as materials researchers, engineers, and academics concerned with the tribology of biomaterials.

- Covers techniques from innovative surgeons and designs from multinational manufacturers, as well as information on improvements in technologies and biomaterials
- Discusses the tribology of all the major materials used in total hip arthroplasty
