Photoinitiators for Polymer Synthesis: Scope, Reactivity, and Efficiency J.P. Fouassier, Jacques Lalevée
Photoinitiating systems for polymerization reactions are largely encountered in a variety of traditional and high-tech sectors, such as radiation curing, (laser) imaging, (micro)electronics, optics, and medicine.

This book extensively covers radical and nonradical photoinitiating systems and is divided into four parts:

- * Basic principles in photopolymerization reactions
- * Radical photoinitiating systems
- * Nonradical photoinitiating systems
- * Reactivity of the photoinitiating system

The four parts present the basic concepts of photopolymerization reactions, review all of the available photoinitiating systems and deliver a thorough description of the encountered mechanisms. A large amount of experimental and theoretical data has been collected herein. This book allows the reader to gain a clear understanding by providing a general discussion of the photochemistry and chemistry involved. The most recent and exciting developments, as well as the promising prospects for new applications, are outlined.
