Zexiang Li, J.F. Canny

Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) Zexiang Li, J.F. Canny

Nonholonomic Motion Planning grew out of the workshop that took place at the 1991 IEEE International Conference on Robotics and Automation. It consists of contributed chapters representing new developments in this area. Contributors to the book include robotics engineers, nonlinear control experts, differential geometers and applied mathematicians.

Nonholonomic Motion Planning is arranged into three chapter groups: *Controllability*: one of the key mathematical tools needed to study nonholonomic motion. *Motion Planning for Mobile Robots*: in this section the papers are focused on problems with nonholonomic velocity constraints as well as constraints on the generalized coordinates. *Falling Cats, Space Robots and Gauge Theory*: there are numerous connections to be made between symplectic geometry techniques for the study of holonomies in mechanics, gauge theory and control. In this section these connections are discussed using the backdrop of examples drawn from space robots and falling cats reorienting themselves.

Nonholonomic Motion Planning can be used either as a reference for researchers working in the areas of robotics, nonlinear control and differential geometry, or as a textbook for a graduate level robotics or nonlinear control course.

From reader reviews:

Terry Hayes:

The book Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) can give more knowledge and information about everything you want. Why then must we leave the great thing like a book Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science)? Some of you have a different opinion about e-book. But one aim in which book can give many data for us. It is absolutely right. Right now, try to closer along with your book. Knowledge or facts that you take for that, you could give for each other; you are able to share all of these. Book Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) has simple shape but the truth is know: it has great and big function for you. You can appear the enormous world by open and read a e-book. So it is very wonderful.

Lilian Anderson:

Now a day people who Living in the era wherever everything reachable by connect to the internet and the resources included can be true or not require people to be aware of each details they get. How people have to be smart in having any information nowadays? Of course the answer then is reading a book. Reading a book can help people out of this uncertainty Information specially this Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) book since this book offers you rich details and knowledge. Of course the details in this book hundred per cent guarantees there is no doubt in it as you know.

Marie Walsh:

This Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) are usually reliable for you who want to be considered a successful person, why. The key reason why of this Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) can be one of several great books you must have is definitely giving you more than just simple studying food but feed an individual with information that probably will shock your earlier knowledge. This book will be handy, you can bring it all over the place and whenever your conditions in the e-book and printed kinds. Beside that this Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) giving you an enormous of experience for example rich vocabulary, giving you trial run of critical thinking that we all know it useful in your day activity. So , let's have it and luxuriate in reading.

James Hutchinson:

Spent a free the perfect time to be fun activity to do! A lot of people spent their spare time with their family, or all their friends. Usually they doing activity like watching television, gonna beach, or picnic within the park. They actually doing ditto every week. Do you feel it? Will you something different to fill your personal

free time/ holiday? Can be reading a book can be option to fill your no cost time/ holiday. The first thing you ask may be what kinds of guide that you should read. If you want to try look for book, may be the reserve untitled Nonholonomic Motion Planning (The Springer International Series in Engineering and Computer Science) can be very good book to read. May be it may be best activity to you.
