Neuromathematics of Vision (Lecture Notes in Morphogenesis)

Neuromathematics of Vision (Lecture Notes in Morphogenesis)

This book is devoted to the study of the functional architecture of the visual cortex. Its geometrical structure is the differential geometry of the connectivity between neural cells. This connectivity is building and shaping the hidden brain structures underlying visual perception. The story of the problem runs over the last 30 years, since the discovery of Hubel and Wiesel of the modular structure of the primary visual cortex, and slowly came towards a theoretical understanding of the experimental data on what we now know as functional architecture of the primary visual cortex.

Experimental data comes from several domains: neurophysiology, phenomenology of perception and neurocognitive imaging. Imaging techniques like functional MRI and diffusion tensor MRI allow to deepen the study of cortical structures. Due to this variety of experimental data, neuromathematics deals with modelling both cortical structures and perceptual spaces.

From the mathematical point of view, neuromathematics call for new instruments of pure mathematics: sub-Riemannian geometry models horizontal connectivity, harmonic analysis in non commutative groups allows to understand pinwheels structure, as well as non-linear dimensionality reduction is at the base of many neural morphologies and possibly of the emergence of perceptual units. But at the center of the neurogeometry is the problem of harmonizing contemporary mathematical instruments with neurophysiological findings and phenomenological experiments in an unitary science of vision. The contributions to this book come from the very founders of the discipline.

From reader reviews:

Kim Gray:

Have you spare time for the day? What do you do when you have considerably more or little spare time? Sure, you can choose the suitable activity to get spend your time. Any person spent their spare time to take a stroll, shopping, or went to the actual Mall. How about open or even read a book eligible Neuromathematics of Vision (Lecture Notes in Morphogenesis)? Maybe it is to get best activity for you. You realize beside you can spend your time with your favorite's book, you can better than before. Do you agree with their opinion or you have other opinion?

Jesus Loveless:

Nowadays reading books be than want or need but also be a life style. This reading addiction give you lot of advantages. Advantages you got of course the knowledge even the information inside the book that will improve your knowledge and information. The details you get based on what kind of guide you read, if you want attract knowledge just go with education and learning books but if you want really feel happy read one having theme for entertaining for example comic or novel. The Neuromathematics of Vision (Lecture Notes in Morphogenesis) is kind of guide which is giving the reader unstable experience.

Todd Apperson:

People live in this new moment of lifestyle always attempt to and must have the extra time or they will get lot of stress from both everyday life and work. So , when we ask do people have spare time, we will say absolutely yes. People is human not a robot. Then we question again, what kind of activity have you got when the spare time coming to anyone of course your answer will probably unlimited right. Then ever try this one, reading guides. It can be your alternative inside spending your spare time, the actual book you have read will be Neuromathematics of Vision (Lecture Notes in Morphogenesis).

Erin Wright:

Your reading sixth sense will not betray a person, why because this Neuromathematics of Vision (Lecture Notes in Morphogenesis) e-book written by well-known writer we are excited for well how to make book that may be understand by anyone who read the book. Written with good manner for you, leaking every ideas and creating skill only for eliminate your current hunger then you still uncertainty Neuromathematics of Vision (Lecture Notes in Morphogenesis) as good book not simply by the cover but also by content. This is one book that can break don't assess book by its handle, so do you still needing yet another sixth sense to pick this kind of!? Oh come on your examining sixth sense already told you so why you have to listening to another sixth sense.
