Chemotherapy of Bacterial Infections

Chemotherapy of Bacterial Infections

Experimental Chemotherapy, Volume II: Chemotherapy of Bacterial Infections: Part I is devoted to the history, development, and progress of experimental chemotherapy of bacterial infections. The subject matter has been arranged according to particular groups of compounds, and in a few instances according to specific diseases. The emphasis of Volume II is placed on synthetic compounds. The literature is covered up to the latter part of 1963. It is hoped that this volume will be found useful by investigators and teachers concerned with experimental work on new substances and by physicians and veterinarians who use them.

The book opens with a discussion of chemotherapy with antibacterial dyestuffs. This is followed by separate chapters on the mode of action of antibacterial substances such as sulfonamides, penicillins, and other antibiotics; the main lines on which research into antibacterial drugs has developed; and drug resistance for chemotherapy. Subsequent chapters deal with antibacterial chemotherapy with sulfonamides, the experimental pharmacology and toxicology of sulfonamides, the use of nitrofurans as chemotherapeutic agents, and antibacterial agents of limited action. The final chapters discuss experimental chemotherapy of tuberculosis and leprosy.
